

LEWA EcoFeed®

The metering pump for
precise filling tasks

A metering pump has the task of metering and transferring fluids precisely and at the right time.

With the new LEWA EcoFeed metering pump, you will be able to solve all your filling tasks. Whether a simplex pump, or a complex metering and filling system, for high and low viscosity applications.

The LEWA EcoFeed delivers a highly precise and reproducible metering result. Due to the special geometry of the rotors, low volumes of only a few milliliters can be precisely metered. Typical applications include filling

tasks for pastry, toothpaste, mayonnaise and cosmetics.

The key component is the LEWA metering pump which is distinguished by its precision technology resulting in high accuracy, security, and reliability. Exactly defined and reproducible metering volumes are achieved by the variability and controllability of the rotation and speed of the LEWA EcoFeed pump.

The metering flow may be monitored by an external flow meter. This would be the first step in a system design which can also be furnished by LEWA. For advanced technology

in metering, the LEWA intellidrive system can be incorporated with the control components. Ask your local LEWA representative for more information.

- nearly 100% metering accuracy
- large capacity range
- high efficiency
- large application spectrum
- interactive programming
- fast and efficient cleaning
- interactive components
- all wetted steel parts are 316L (1.4404)
- special seal-systems for different products available
